## RUST INHIBITORS

### JAO-6

#### Rust Preventive Film and Penetrating Lubricant

##### Description

JAO-6 is a solvent-dispersed rust preventative film and penetrating lubricant that displaces freestanding water and provides up to 12 months of indoor protection. As a light lubricant, JAO-6 can be used to reduce friction in a variety of situations. As a penetrating oil it is outstanding at releasing rusted nuts, bolts, and other items quickly. It is safe for use on all metal types.

##### Key Properties

- All-in-one rust preventive, lubricant, demulsurant and penetrant, covering a broad range of applications
- One gallon covers approximately 1,225 sq. ft., making it inexpensive to use
- Provides approximately 12 months of indoor rust protection, preventing lost production
- Easy to clean off with mild alkaline soap, reducing subsequent production costs
- Leaves behind a hardly noticeable rust protecting film

##### Technical Properties

Color (Concentrate): Brown

Flash point (Concentrate): 140°F

Foam: Low

##### Use Instructions

Use JAO-6 undiluted. It can be applied by brush or pump-up sprayer. One gallon will cover approximately 1,225 sq. ft. Not for use in a recirculating spray system. JAO-6 will leave a hardly noticeable thin film coating after approximately 20 minutes dry time.

##### Precautions

KEEP OUT OF THE REACH OF CHILDREN. Please refer to the label and Material Safety Data information for all warnings, recommendation for safety equipment, and other regulatory information.

Up to 12 months of indoor protection
